HIGH FLYERS

SESSION 5 TRIGONOMETRY

QUESTIONS

90 minutes

QUESTION 1

- 1.1 Draw the graph of $h(x) = \sin 2x - \cos 2x$ for $-90^\circ \leq x \leq 180^\circ$. (4)
- 1.2 The diagram below shows the graphs of $f(x) = \cos x + 1$ and $g(x) = \sin 2x$, for $0^\circ \leq x \leq 360^\circ$. Use it to find the approximate general solution to $2\sin x \cos x = \cos x + 1$. (3)

QUESTION 2: Solving trig equations

- 2.1 Find the general solution of $\sin^2 \beta + \sin 2\beta = 1$, where $\cos \beta \neq 0$ (4)

QUESTION 3: Miscellaneous manipulations and calculations

- 3.1 Evaluate:
- 3.1.1 $\cos^2 15^\circ - \sin^2 15^\circ$ (3)
- 3.1.2 $\sin 105^\circ$ (5)
- 3.2 If $\sin 21^\circ = a$, express the following in terms of a .
- i. $\cos 42^\circ$ (3)
- ii. $\sin 81^\circ$ (3)
- 3.3 If $\sin 22^\circ \cos 12^\circ = a$ and $\sin 12^\circ \cos 22^\circ = b$, express $\sin 34^\circ$ in terms of a and b . (2)

QUESTION 4: Simplifying expressions / algebraic manipulations

- 4.1 Simplify the following to a single trig ratio:

$$\sin\left(\frac{\beta}{2} + 45^\circ\right) \cdot \cos\left(\frac{\beta}{2} + 45^\circ\right) \quad (3)$$

4.2 Simplify the following without using a calculator:

$$\frac{\cos(45^\circ - \theta)}{\cos 45^\circ \cos \theta} - \tan \theta \quad (5)$$

QUESTION 5: Proving identities

5.1 Prove that: $\sin 2x + 2\sin^2(45^\circ - x) = \sin^2 x + \cos^2 x$ (4)

5.2 Hence show that: $\sin^2 15^\circ = \frac{2 - \sqrt{3}}{4}$ (3)

5.3 Given: $\sin \theta \cdot \cos \beta = -1$

5.3.1 Write down the maximum and minimum value of $\cos \beta$. (2)

5.3.2 Solve for $\theta \in [0^\circ; 270^\circ]$ and $\beta \in [-180^\circ; 90^\circ]$. (6)

[15]

QUESTION 6

AB is a vertical tower of p units high.

D and C are in the same horizontal plane as B, the foot of the tower.

The angle of elevation of A from D is x . $\widehat{BDC} = y$ and $\widehat{DCB} = \theta$.

The distance between D and C is k units.

6.1.1 Express p in terms of DB and x . (3)

6.1.2 Hence prove that:
$$p = \frac{k \sin \theta \tan x}{\sin y \cos \theta + \cos y \sin \theta} \quad (5)$$

6.2 Find BC to the nearest meter if $x = 51,7^\circ$, $y = 62,5^\circ$, $p = 80 \text{ m}$ and $k = 95 \text{ m}$. (4)

[12]

QUESTION 7

In the diagram below, D, B and C are points in the same horizontal plane. AC is a vertical pole and the length of the cable from D to the top of the pole, A, is p meters. $AC \perp CD$. $\widehat{ADC} = \theta$; $\widehat{DCB} = (90^\circ - \theta)$ and $\widehat{CBD} = 2\theta$.

7.1 Prove that: (5)

$$BD = \frac{p \cos \theta}{2 \sin \theta}$$

7.2 Calculate the height of the flagpole AC if $\theta = 30^\circ$ and $p = 3$ meters. (3)

7.3 Calculate the length of the cable AB if it is further given that $\widehat{ADB} = 70^\circ$ (5)

[13]
